FOR IMMEDIATE RELEASE:

Alsip, IL – January - GC America Inc. introduce GC Initial™ LiSi Specialized Veneering Ceramic for lithium disilicate.

GC America proudly presents Initial LiSi, a new member of the popular ceramic line of Initial. This new ceramic is a specialized veneering ceramic designed for lithium disilicate frameworks. With these types of frameworks gaining popularity, GC now offers a material for highly aesthetic and durable restorations for long-term patient satisfaction.

Thanks to the exact cross-matched coefficients of thermal expansion (CTE), its low firing temperature and high stability during multiple firings, GC Initial LiSi ensures you safe and predictable processing of lithium disilicate frameworks.

GC Initial LiSi can be used in the individual layering and in the cut-back technique following the proven Initial ceramic concept; one shade system; one layering technique. If you want to go even further, full anatomical frameworks can be enhanced by staining using the GC Initial Lustre Pastes NF. The simplicity and easy handling of the Initial LiSi powders assure a short learning curve offering quick, aesthetic and economical results.

Shipment of product will begin March 1, 2015.

GC Initial LiSi – The perfect choice to master all your challenges
