COE-RECT™

HARD DENTURE RELINE AND REPAIR MATERIAL

For use only by a dentist or physician in the recommended indications.

RECOMMENDED INDICATIONS

Self-curing, rigid denture liner for permanent hard relines. For use in chairside procedures.

CONTRAINDICATIONS

Patients who have shown sensitivity to the material. In case of allergy, please refer to physician.

DIRECTIONS FOR USE

Product Handling:

Use caution when opening, COE-RECT Liquid is a highly flammable liquid and vapor; keep away from heat, hot surfaces, sparks, flames and other ignition sources. Use with adequate ventilation. Do not ingest or inhale vapor. Personal Protective Equipment (PPE) such as gloves, face masks and safety eyewear should always be worn. Check bottle with liquid before using. Make sure that upon removal of cap, the bottle is properly sealed or obstructed. Some containers may contain an insert (as a seal). The insert must be on in the cap and not obstructing opening.

In case of contact with eyes, wash promptly with large amounts of water for at least 15 minutes. Get prompt medical attention if irritation occurs. Get prompt medical attention if eye enters the eye. In case of contact with skin, wash thoroughly with soap and water. Store securely. Store in a well-ventilated place. Keep cool. Dispose of all waste according to local regulations. For more information, read Safety Data Sheet (SDS).

SUGGESTED RENEW PROCEDURE

1. Roughen area of denture to be rebased. Remove sufficient material to provide for the depth of the lining of COE-RECT. Use a coarse sandpaper disc to roughen the peripheral border. Remove all undercut to allow setting of COE-RECT. Clean and dry the denture thoroughly.

2. Coat labial and buccal surfaces of the denture with COE LUBRICANT. Do not apply the lubricant within 1/8 inch of the peripheral border. If the denture has labial and buccal surfaces that are exposed, protect them with a covering of COE LUBRICANT. COE-RECT will not adhere to surfaces protected by COE LUBRICANT.

3. Mix COE-RECT in proportion of: Pour the liquid into a disposable mixing cup and then add the powder slowly. Stir the mixture thoroughly for 30 seconds. To avoid the introduction of bubbles into the mix, do not spatulate more than 30 seconds. Mixing accessories are included in the professional package (not separately).

4. Pour the COE-RECT mixture onto the tissue surface of the denture 1 minute after mixing. Equally spread with the spatula. Allow the mixture to reach a honey-like consistency.

5. Have patient thoroughly rinse with cold water. Since an exothermic reaction is characteristic of self-curing acrylics, coat mucosal tissue with COE LUBRICANT (available separately).

6. Seat the denture as if you were taking an impression. Instruct the patient to close lightly into occlusion. This closing will distribute the COE-RECT evenly and force the denture between the lips and cheeks so that a muscle-trimmed peripheral border is obtained. After muscle trimming, remove the denture and rinse under cold water. Trim away the excess material. Please remove the tissue from the peripheral border immediately.

7. After curing, trim away whatever excess has remained. COE-RECT may be finished and polished 15-20 minutes from the start of the procedure.

8. Instruct the patient to hold the denture in occlusion until heat becomes uncomfortable. Remove denture carefully. Although the curing reaction is completed at 10 minutes, the material will continue to harden for approximately 3 more minutes.

9. After curing, trim away whatever excess has remained. COE-RECT may be finished and polished 15-20 minutes from the start of the procedure.

SUGGESTED RELINE PROCEDURE

1. With a large bur, roughen area of denture to be rebased. Remove sufficient material to provide for the depth of the lining of COE-RECT. Use a coarse sandpaper disc to roughen the peripheral border. Remove all undercut to allow setting of COE-RECT. Clean and dry the denture thoroughly.

2. Coat labial and buccal surfaces of the denture with COE LUBRICANT. Do not apply the lubricant within 1/8 inch of the peripheral border. If the denture has labial and buccal surfaces that are exposed, protect them with a covering of COE LUBRICANT. COE-RECT will not adhere to surfaces protected by COE LUBRICANT.

3. Mix COE-RECT in proportions of: Pour the liquid into a disposable mixing cup and then add the powder slowly. Stir the mixture thoroughly for 30 seconds. To avoid the introduction of bubbles into the mix, do not spatulate more than 30 seconds. Mixing accessories are included in the professional package (not separately).

4. Pour the COE-RECT mixture onto the tissue surface of the denture 1 minute after mixing. Equally spread with the spatula. Allow the mixture to reach a honey-like consistency.

5. Have patient thoroughly rinse with cold water. Since an exothermic reaction is characteristic of self-curing acrylics, coat mucosal tissue with COE LUBRICANT (available separately).

6. Seat the denture as if you were taking an impression. Instruct the patient to close lightly into occlusion. This closing will distribute the COE-RECT evenly and force the denture between the lips and cheeks so that a muscle-trimmed peripheral border is obtained. After muscle trimming, remove the denture and rinse under cold water. Trim away the excess material. Please remove the tissue from the peripheral border immediately.

7. After curing, trim away whatever excess has remained. COE-RECT may be finished and polished 15-20 minutes from the start of the procedure.

8. Instruct the patient to hold the denture in occlusion until heat becomes uncomfortable. Remove denture carefully. Although the curing reaction is completed at 10 minutes, the material will continue to harden for approximately 3 more minutes.

9. After curing, trim away whatever excess has remained. COE-RECT may be finished and polished 15-20 minutes from the start of the procedure.

PACKAGES

COE-RECT Professional Package

- Coe-Rect Liquid (40 ml)
- Coe-Rect Powder (8 oz)
- Coe-Rect Liquid (14 ml)
- Coe-Rect Powder (2 oz)
- Coe-Rect Repair Liquid (14 ml)
- Coe-Rect Repair Powder (2 oz)
