Problem: I want to keep more endodontic treatment in house, but I need a simplified system that I can feel confident will help me achieve faster, more predictable results.

Solution: Hyflex™ EDM NiTi Files combine flexibility, fracture resistance and cutting efficiency in one modular system. Fewer files are required for cleaning while preserving anatomy. Hyflex EDM NiTi Files have controlled memory properties which allow them to follow the anatomy of the canal. Additionally, they offer extreme fracture resistance and regenerate to their original shape after autoclaving. These features create a system that gives you reliable, quick and easy results.

Problem: Some cordless loupe lights tend to be heavy and they do not connect securely to the loupes, needing constant adjustment.

Solution: Feather Light LED (cordless hybrid) is the lightest loupe on the market with custom-fit mounts for each brand of loupe. Since the device is also a cordless hybrid, it eliminates the problem of tangling hands and arms with longer cords plugged in elsewhere.

Problem: Many patients experience dentinal hypersensitivity. This is especially true of adult patients who have received periodontal therapy, or have extensive gingival recession and exposed root surfaces, or xerostomia.

Solution: Riva Star is as a new generation SDF (silver diamine fluoride) desensitizer that immediately relieves tooth sensitivity for adults over 21 years of age. Riva Star’s key ingredients are silver diamine fluoride (SDF) and potassium iodide (KI). Unlike any other SDF based system, Riva Star’s two-step patented procedure minimizes the risk of staining the tooth black. This process results in a more esthetically acceptable tooth colored appearance for the patient. The use of Riva Star enhances bonding of glass ionomers to dentin. Riva Star provides a quick, painless and easy treatment option for adults and the elderly.

Note: SDI Limited has been successful in registering Riva Star in several key Latin American countries such as Brazil, Peru and Colombia as well as in Canada as an anti-caries agent. In Europe and Australia it is registered for the treatment of hypersensitivity.

Problem: Many dentists are interested in utilizing glass ionomer restoratives but do not have a triturator for mixing capsules.

Solution: GC Fuji® Automix LC is a radiopaque resin-reinforced glass ionomer available in automix delivery. It comes with an ergonomic dispenser, which allows product to be directly dispensed into the cavity.
