Apply CAVITY CONDITIONER (10 seconds) to remove the smear layer. Rinse and gently dry. Do not dessicate.

Dispense GC Fuji Automix LC in increments of 2 mm. Light cure for 20 seconds.

Finish and polish. Apply GC Fuji COAT LC, GC Fuji VARNISH or G-COAT PLUS to finished restoration.

Dispense GC Fuji Automix LC. Light cure for 20 seconds. Apply a bonding agent such as G-Premio Bond following manufacturer's instructions.

Fill with a GC restorative composite material.

Restoration of Class III, V and primary teeth

Base for Class I and Class II cavities using a sandwich laminate technique.

*Precautions for automix

**NOTE**

1. Retract piston completely into Dispenser.
2. Turn cartridge fully to the right position.
3. Slide piston release forward until it stops. Remove cartridge cover.
4. Before dispensing for the first time or after a long interval, bleed the pastes from the cartridge.
5. Attach the mixing tip on the cartridge. Push the mixing tip completely until the end.
6. Hold the side of sleeve and slide it forward to LOCK the mixing tip.
7. After dispensing, slide the sleeve backward (✓) and remove mixing tip. (✗)
8. Always put the cover back on.

PASTE PAK CARTRIDGE LOADING AND DISPENSING
Apply CAVITY CONDITIONER (10 seconds) to remove the smear layer. Rinse and gently dry. Do not dessicate.

Dispense GC Fuji Automix LC in increments of 2 mm.

Light cure for 20 seconds.

Finish and polish.

Apply GC Fuji COAT LC, GC Fuji VARNISH or G-COAT PLUS to finished restoration.

Restoration of Class III, V and primary teeth

Base for Class I and Class II cavities using a sandwich laminate technique.

Bleed small amount of the mixed paste on a pad before dispensing the material into the cavity.

Before inserting mixing tip, check the two openings of the cartridge or bleed small amount of pastes to ensure even flow from the cartridge.

Precautions for automix:

1. Retract piston completely into Dispenser.
2. Turn cartridge fully to the right position.
3. Slide piston release forward until it stops. Remove cartridge cover.
4. Before dispensing for the first time or after a long interval, bleed the pastes from the cartridge.
5. Attach the mixing tip on the cartridge. Push the mixing tip completely until the end.
6. Hold the side of sleeve and slide it forward to LOCK the mixing tip.
7. After dispensing, slide the sleeve backward (↑) and remove mixing tip. (↓)
8. Always put the cover back on.

Consult Instructions for Use.
