LOOK AT THE SURFACE...

White Spot Lesion

Demineralized tooth surface.

**Fluoride
Subsurface Not Remineralized**

After application of a 1mL solution of 1000ppm fluoride for one minute four times daily for 14 days, the tooth surface has been remineralized, but the subsurface lesion is intact.

**MI Paste™ with RECALDENT™ (CPP-ACP)
Subsurface Remineralized**

After application of MI Paste with RECALDENT™ (CPP-ACP) for one minute four times daily for 14 days. A significant improvement can be seen compared to 1000ppm fluoride.

Micro-radiograph - in situ testing,
University of Melbourne, Australia.

**"Tooth decay is never going to be solved with stronger fluoride and more of it."
- Brian Nový, DDS**
