FOR IMMEDIATE RELEASE:**[GC America Inc. introduces GRADIA® PLUS]**

Alsip, IL – February 2019, GRADIA® PLUS is a modular composite system for indirect restorations. Light-cured composites for dental restorations have continuously gained in popularity over the years. They stand out for their ease of use and speed, but also, for their friendliness to the opposing dentin and shock absorption qualities; all keys to success in a variety of clinical situations. With a long tradition in composite technology, GC has developed GRADIA PLUS - a high strength, nano-hybrid, light-curing indirect composite system. GRADIA PLUS has brightness, translucency, chroma and a natural opalescence in the oral environment that compares favorably to ceramics. It also has fewer standard colors and comes in a modular format; offering you productivity, flexibility and individuality. GRADIA PLUS unique modular concept has fewer standard shades but uses a more individual mixing and layering approach, making it more compact and cost-effective. Nevertheless, it will meet all demands for indications or techniques used from classic or multi-chromatic build-up to monolithic approach.

- State-of-the art ceramic polymer technology
- Red and white aesthetics in perfect harmony
- Indication related consistency of pastes
- Rational and modular
- Fast cure times

GRADIA PLUS will be available for shipment March 29, 2019. Product is available for purchase in U.S. and Canada.
