- FOR IMMEDIATE RELEASE -

GC America Introduces G2-BOND Universal

Alsip, IL – With over one billion composite restorations and a century of established expertise in dental materials, GC is broadening its adhesive portfolio with G2-BOND Universal, a two-bottle universal bonding system which features exceptional properties in strength and versatility. G2-BOND Universal’s proprietary Dual H-Technology gives clinicians what they would expect from existing self-etch and etch-and-rinse “gold standard” products, plus much more. G2-BOND Universal will be available for purchase effective February 15, 2021.

Designed to improve restorations, G2-BOND Universal is an all-around adhesive, giving clinicians the convenience of choice between self-etch and etch-and-rinse in one system. The versatility of this product extends to its efficacy across multiple indications such as direct restorations, Immediate Dentin Sealing (IDS), intra-oral repair, treating hypersensitivity, the luting of indirect restorations and more.

The Dual H-Technology of G2-BOND Universal optimizes bonding, both to tooth structure and restorative materials, by its smooth transition from hydrophilic to hydrophobic characteristics. The remarkably hydrophobic bond layer lowers the occurrence of water sorption, which decreases the risk of degradation and leads to enhanced durability and reliable results. Additionally, the optimal thickness of G2-BOND Universal acts as a shock absorbing layer to avoid gap formation and debonding, especially with high shrinkage and bulk-fill composites.

Clinicians from around the world have performed many restorations using G2-BOND Universal to assess its efficacy and have confirmed the product’s impressive sealing effectiveness with virtually no post-operative sensitivity. Clinicians also expressed high satisfaction with the results from both self-etch and etch-and-rinse mode. The participating dentists lauded G2-BOND Universal’s easy and pleasant handling next to the system’s waste-free and easy-to-use dispensing.

G2-BOND Universal is an incredibly versatile product, leading the way in adhesive dentistry as a new two-bottle universal bonding standard in all etching modes. Discover the new standard of two-bottle adhesive dentistry with your choice of preferred etching mode for reliable results in a wide range of indications. For more information on G2-BOND Universal, or any other GC product, please visit www.gcamerica.com.
